

Mexico's Alien Skeletons Examined by Doctors

The Joe Rogan experience You know that's what Bob Lazar thinks that spaceship that he worked on was made with he thinks it was somehow 3D printed because it has no seams Mm You paying attention to CFO shit Mm No good for you No but III I know you do So I'm I'm gonna ask cause I'm it's like this shit just there's so much shit that's just coming out now I don't I don't understand though What's the motive behind it just randomly coming out now I'm super suspicious So what's the place Area area 51 like um I'm assuming I see it's been real That's real Yeah but area 51 was used for all sorts of training purposes They had uh all sorts of uh programs that were running out there I think that's where they developed the B 52 Is that where they developed it in area 51 They they developed a bunch of different uh military technologies out there So that was true about the the we don't know we don't know I'm just guessing about whether or not they were working on UFO S but they were definitely working on other stuff too It's a legitimate military base So you think these videos real that's that's coming out all you think is I think the videos are real what they're filming I don't know what that is It could be that it's some super sophisticated us control drone that um was built in some sort of a program that's top secret and it has some new super sophisticated uh propulsion system that they don't want us to know about And so they um pretend it's coming from another world and they say oh these are offworld crafts exhibiting behavior that's impossible to replicate in America I wonder I wonder because if they're talking about it like that they're literally saying off world like boy I get suspicious I get suspicious because they're not super honest about anything Why would they be honest about spaceships And then it just randomly happens now It's well it's another nice distraction It gets people excited you know the fucking fake little Mexican UFO baby they're doubling down No they're not I took it This is from the MRI yesterday They said it's one skeleton What did they like They're trying other like American scientists are saying well then let people test samples of it or something But did they have images from the MRI I mean I don't know that they showed those actual images but the doctor that took it a they were here they belong to a single skeleton that has not been joined to other pieces interesting footage from the team carrying out the test It shows one of the bodies bearing an elongated head a small upturned nose and two slanted eyes The subjects look tiny when held up by the doctors examining the watching for the watching journalists Then this also is like

this person says that uh I think it's the doctor has claimed that he talks to the version of Guadalupe and the extraterrestrials will not talk to her like they talk to him because she doesn't believe in them Maybe there's drugs maybe he's telling the truth maybe he did talk to the virgin of Guadalupe Um So that's what it's supposed to be I want to see what those images look like They don't have them You ever notice that none of the images be clear Oh shit like that we really want to see Yeah it's a real problem I talked to this one guy Christopher Mellon He used to be an intelligence agent and he said that they do have clear footage It just hasn't been leaked but that he's aware of it and some of it is pretty mind blowing He said show me until this until I see it I don't know man I feel like a dummy because I want to believe in it so bad That's the problem because it's so fun You know the idea of spaceships coming here from another galaxy I don't know I don't know how fun Especially if they ain't friendly Well if they weren't friendly we'd already be fucked Right I mean if they've been coming here forever supposedly and they haven't heard us yet we're probably ok You know I think they're probably observing us They're probably if they are coming from another world they're probably making sure we don't blow ourselves up They're probably realizing that we're at this uh convergence of the evolution of the biology and then science and technology and its abilities that far surpass like the speed that the biology evolves Like the biology evolves very slowly relatively compared to these computers the things that they're able to do these spaceships and the flying cars and it's like we have so much ability now and we're still the same kind of creature We're still humans you know But now we have this insane ability to blow up a whole country like we have nuclear bombs we're all pointing them at each other and there's enough to wipe out the whole world Like if I was an alien I'd be like well let's keep an eye on these crazy fucks You know these people are wild Let's keep an eye on them Yeah Yeah Yeah definitely Uh I'm gonna keep my distance from that I don't wanna fly the mall I don't wanna do none of that shit I just man live my life Yeah It's gonna be a long time before people get comfortable moving to Mars I don't know how long that's gonna be But but that's a fucking commitment Didn't they have somebody recently go Are they letting people go now No they haven't let people go yet They've uh sent drones So they have the Mars Rover that goes around on Mars but that's just a robot But the idea is to have people on Mars I think didn't Elon say by like 2035 or something like that He wants a man trip to Mars It's crazy He keeps saying his name He's the only doing whatever the fuck you want to do at this point

He's a wild fellow
